

INSTRUCTION MANUAL

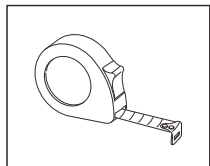

Plain Mirror

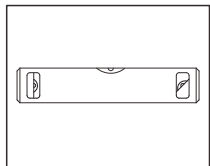

SKU:2MIR100/2MIR101

Hanging the mirror

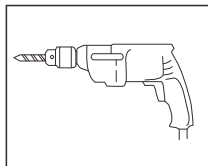

Installation Tools

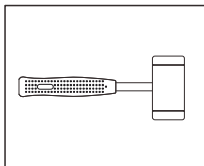

Measuring tape

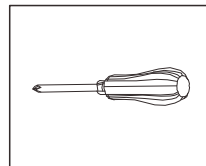

Spirit level

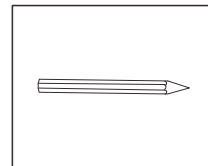

Drill

Hammer

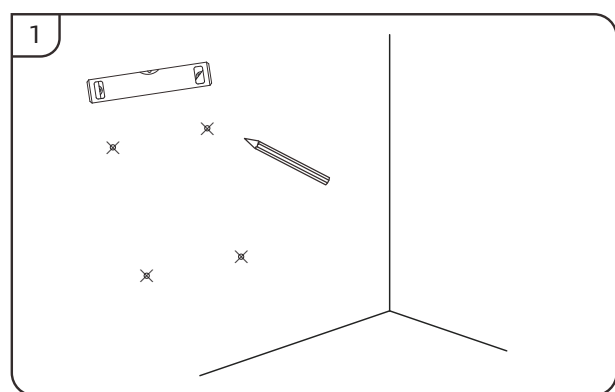

Screwdriver

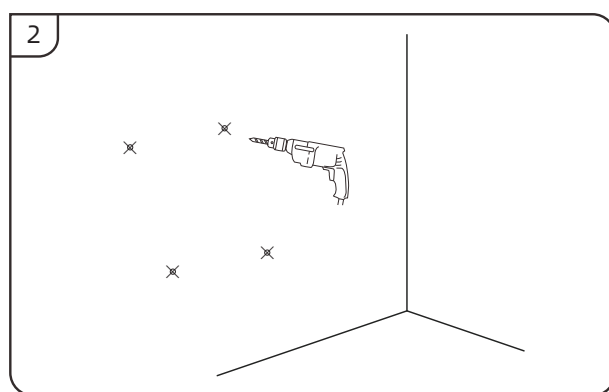

Pencil

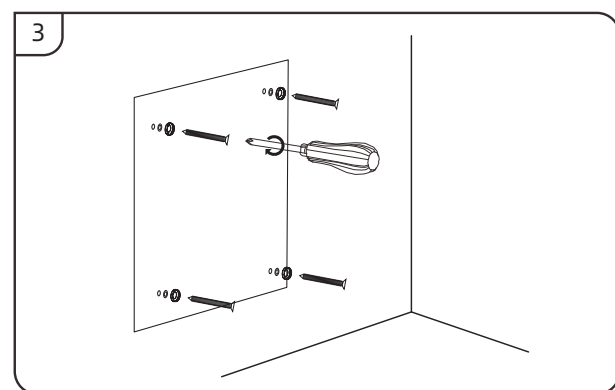

Installation Steps

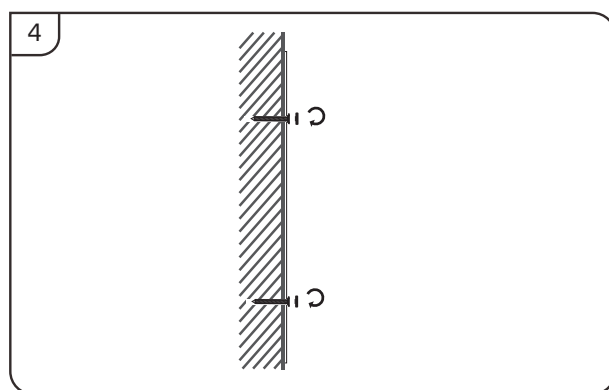

Make sure the wall is solid and suitable for safely supporting the overall weight of the mirror once installed. Use a pencil to measure and mark the positions of the mirror nails, securing screws, and Rawl plugs. At the same time, use a spirit level to ensure the bracket is perfectly level.

Select a $\Phi 5$ drill bit and drill holes in the marked area to a depth of 40mm. (If the wall is tile, use a special ceramic drill).

Place the rubber gasket over the hole on the glass surface. Insert the screw through the metal ring and rubber gasket, then secure it to the wall through the hole.

Finally, attach the decorative cap onto the metal ring.

Recycling and disposal

Please recycle the packaging in accordance with your local government regulations on waste handling, and follow the same advice at the end of the products life.
